Coccolithophorids are algae that produce lime and that are considered vital for storage of CO₂ in the sea.

Lime-producing algae are considered vital for storage of CO₂ in the sea.

The answers are often found in the details. Tiny objects contain the greatest discoveries. This series of close-ups show a selection of the research conducted at the University of Bergen.

In this video Senior Researcher Mikal Heldal at the Department of Biology presents a close-up of these environmentally friendly algae.
