

An open letter to Danish universities: Let us show the way towards a more ambitious climate agenda

[Natural Sciences](#)[1]

[Natural Sciences](#)[1][Climate Change](#) [2][Climate Solutions](#) [3][Researcher Zone](#) [4][Denmark](#) [5][ForskerZonen](#) [6]

The letter is signed by more than 650 academics from a number of research fields in Denmark. They are calling for universities to lead by example, and implement climate friendly policies in the workplace in the hope of inspiring change in other sectors.

On October 8, 2018 the UN's panel on climate change, IPCC, published its [latest report](#) [7].

It should be unnecessary at this time to emphasise the scope and gravity of the threat posed by human-caused climate change. But the report made it even clearer that it is vital to limit the increase in the global mean temperature to 1.5 degrees, and that achieving this goal will require radical political and social change on a global scale. If we do not start a global transition to a greener society immediately the consequences will be catastrophic.

Though many researchers at Danish universities are highly active in the debate on climate change, there is at present no ambitious climate agenda across these establishments. With this letter, we strongly encourage the university management to immediately develop and implement a series of far-reaching policies to drastically reduce the universities' carbon emissions.

The universities have a particularly heavy responsibility with regard to the implementation of an ambitious climate agenda, for three main reasons.

Firstly, researchers contribute to a particularly high degree of carbon emissions, especially by using air transport to travel to conferences. High emissions offer an equally large potential for reducing the researchers' climate footprint.

Secondly, scientific authority is a key topic in the fight against climate skepticism. Researchers cannot expect to be taken seriously in the debate on climate change if they do not themselves implement the measures they propose. We have to put our own house in order first if we want others to listen.

Thirdly, the universities are ideally suited to lead the fight against climate change by developing and testing innovative, interdisciplinary and evidence-based measures for reducing carbon emissions. If new solutions are not developed at the universities, where else should they come from?

Like any other large company, the universities have an obligation to assume their share of social responsibility towards their employees and the environment. Furthermore, as a place of learning, the universities have enormous potential for bringing about positive social change in the fight against climate change: through their contact with thousands of young students; teachers can cause a ripple effect throughout society. It is time for the universities to take this responsibility seriously.

We therefore demand that the management account for how it much it plans to reduce the universities'

emissions, as well as the specific policies that are to be implemented to reach this goal, including technical, administrative, behavioral and pedagogical initiatives.

An ambitious and long-sighted climate agenda, founded on clear, evidence-based goals for reducing carbon emissions, will necessarily comprise a broad spectrum of far-reaching initiatives, including:

1. drastically reducing flights and supporting climate-friendly alternatives
2. reducing energy consumption and investing in sustainable energy
3. investing in technologies that enable remote participation at international conferences
4. supporting environmental-friendly solutions at the universities' canteens and conference dinners
5. increasing waste sorting

With eager expectation, we await the university management's response to these global challenges.

Signatories to the open letter, addressed to university management

More than 600 academics (*656 at the time of publication*) from universities across Denmark have signed the open letter, which has been sent to management and boards of universities throughout the country.

The list of signatories below, includes professors, lecturers, senior scientists, associate professors, postdocs, PhD students, and scientific assistants, from a range of academic fields.

- Marc Malmdorf Andersen
- Jens Friis Lund
- Sophus Helle
- Felix Riede
- Anton Stahl Olafsson
- Massimo Pizzol
- Christian Fertner
- Thomas Meinert Larsen

Fact box

The letter is signed by researchers both inside and outside of climate research and has been sent to all management and boards of universities in Denmark. Their message is clear and concise: Universities can pave the way for an ambitious climate policy at the workplace. And hopefully inspire other sectors.
